

PANELEX

INDUSTRIES

You need Panels, You need Panelex.

We would like to introduce ourselves and offer you our complete service in your panels and flashings requirements. Our products are made of pre-painted galvanized sheeting, available in standard colors, or post painted aluminum in any color. All our aluminum is painted after fabrication to eliminate stretch cracking of paint in the corners.

Our CNC metal fabricator shop has a shear and brake capacity of up to 12 feet, and a material capacity of 11 gauge Aluminum and 16 gauge Steel.

Our PPG approved paint facility offers numerous architectural finishes including **Duracron** and **Duranar**. We are also Valspar approved applicators, allowing us to offer a wide range of colors in any system.

We also offer custom coatings of your extrusions (aluminum or vinyl) up to 25 feet in length.

Our all-in-house facility allows us to simplify the production process, ensuring exact color matches of your metal work with your Glazing Extrusions.

Simply

- 1) Fax us your metal requirements**
- 2) Provide us with your color scheme**
- 3) Drop off your extrusions**
- 4) Pick up your completed order**

In addition to high temperature oven, we also have a low temperature cure oven on site, which is ideal for air-dry paint application and is designed to force cure composite panels or vinyl extensions.

We hope our services will be of use to you.
